From

Prof. Dr. Patrícia Izar
University of São Paulo
Department of Experimental Psychology

Dear Prof. Dr. Josep Call,

I am submitting the manuscript entitled "Variation of glucocorticoid metabolite levels is associated with survival demands in immature and reproductive demands in adult wild black capuchins (*Sapajus nigritus*)" (22 pp., including references, along with 3 figures), by Caio M. Moreira; Lucas Peternelli dos Santos; Maria Bernardete C. Sousa & Patrícia Izar, to be published as an original scientific article in the *International Journal of Psychological Research*. All co-authors are in agreement with the contents of the manuscript and the order of authorship and will be informed about the editorial decisions in a timely manner.

I declare that this original material has not yet been published elsewhere. All four co-authors have agreed to submit this manuscript for publication in the *International Journal of Psychological Research*. I also state that all research reported in this manuscript has met the appropriate national and institutional guidelines for animal research.

Thank you very much for your attention.

Sincerely,

Prof. Dr. Patrícia Izar

International Journal of Psychological Research

International Journal of Psychological Research welcomes you to the guidelines of the code of ethics and bioethics of the exercise of psychology in Colombia (<http://www.tribunales.colpsic.org.co/normatividad.htm>) and APA (<http://www.apa.org/ethics/code/index.aspx>) in relation to the ethical standards of research and publication.

Based on the described above, it will be considered violations to the ethics of research and publication in the field of psychology those that ignore the following principles:

- 1. Institutional approval:** In order to obtain approval of institutional research, accurate information about research proposals must be provided.
- 2. Informed consent for research:** The collection of primary data for research and publication must have proper informed consent (for greater detail, see paragraphs 3.10, 4.07, 8.02, 8.03, and 8.07 of the code of ethics of the APA). Researchers can ignore the informed consent only when there are reasonable grounds to believe that the research will not cause injury or harm, and when it is permitted by the laws, federal or institutional regulations (see paragraph 8.05 of the code of ethics of the APA)
- 3. Clients/patients, students and subordinates as participants in the research:** Researchers should follow the appropriate steps to protect possible participants of the adverse consequences of decline or withdraw from the study; in addition, those who participate in the research as a school requirement, will be given the choice of equivalent alternative activities.
- 4. Incentives for participation in research:** Efforts will be made to avoid excessive economic incentives or inappropriate incentives, when they constitute a form of coercion for participants; but if it is offered a professional service as a change, then it should clarify the nature of the service, as well as the risks, obligations and limitations.
- 5. Cheating on the research:** An study might not be done when cheating is involved, at least that the justification for the possible scientific or educational value that is ineffective through non-deceptive research can be determinate. If the deception has become part of the research for valid reason, as soon as the participants have finished it, they will be notified on such proceeding; this notification will not be after they have finished collecting data, since the participants may request their exclusion at any stage of the process. Cheating on research involving physical or emotional pain is also not supported.
- 6. Feedback:** Participants should be properly informed of the characteristics of the research (objectives, results, and conclusions) and their concerns must be clarified. If for scientific reasons it should be delayed the transmission of any results, take the necessary measures to reduce the risk of damage. If the resulting information could be harmful for the participant, it shall take a timely decision on its transmission (hide it or show it, can cause some kind of damage).
- 7. The care of animals in research:** Researching with animals should carry out of agreement with legal standards, by trained persons and avoiding cause injury or unnecessary pain to animals (see paragraph 8.09 of the code of ethics of the APA for more details).

International Journal of Psychological Research

8. **Result of data in research:** The invention or data modification is considered a violation of the ethics of research. If it is found mistakes in published data, it must be taken the right steps to correct them and make them public.
9. **Plagiarism in research:** Psychologists should not use work or non- own data as if it were from themselves. The use of non- own data requires accreditation
10. **Publication credits:** Researchers only acquire credit, including authorship, for those works that they have done and which they have contributed to substantially. Credit is awarded in direct function with the contribution to the work and irrespective of the institutional status of the person. In relation to students, this should be listed as principal author in a work with multiple authors, which is based on its doctoral dissertation (see paragraph 8.12 of the code of ethics of the APA for more details).
11. **Duplicate publication of data:** It will not be published as original data those that have been previously published. This does not preclude the reissue of data when they have their respective recognition.
12. **Arrangement of data of the research for verification:** Data must be available for the verification of the published results, provided to protect the confidentiality of the participants (see paragraph 8.14 ethics of the APA for more details).
13. **Reviewers:** Material under publication reviewers or other academic work must respect confidentiality, ownership and authorship rights related information.

I certify that I (we) Caro Margarido Morcina have met the ethical principles mentioned in the APA and in the code of ethics and bioethics of the exercise of psychology in Colombia, about research with human participants and/or care and use of animals in the implementation of the research presented in the manuscript entitled: _

VARIATION of glucocorticoid metabolite levels is associated with survival demands in immature and reproductive demands in adult wild black capuchins (Sapajus nigritus)

International Journal of Psychological Research

To **International Journal of Psychological Research**, people must award the credit of authorship for a work that they really have made or with which contributed substantially (Standard 8.12^o of the code of ethics of the APA, credits on the publications). The smaller contributions, which are not authorship, should be recognized in a note (see section 2.03 of the APA). It is responsibility of the authors to determinate the authorship and the order in which the names of two or more authors will appear in the work. The principal authorship and the order of the credits of authorship must accurately reflect the contribution of people involve.

Mentioned previously, the author(s) participant(s) of the research entitled:
Variation of glycaemic and metabolic levels is associated with survival demands in foraging and reproductive demands in adult wild black capuchins (*Sapajus nigritus*)

Certifies its authorship in the order in which they appear for their contributions and are responsible for the content posted.

By ceding the copyright rights the authors allow **International Journal of Psychological Research** to distribute the work broadly, check the reuse of the work by others and take care of the necessary procedures for the registration and administration of copyright. At the same time our editorial board represents the interests of the author and allows authors to re-use his/her work in multiple forms.

Given the above information, the author (s) part of the research entitled: *Valuation of research and network links associated with survival demands in a culture and reproductive demands in adult world black capuchins (Sapajus nigres)*

Transferred the copyright to the journal called "International Journal of Psychological Research". This transfer does not imply other rights which are not those of authorship (such as for example those concerning patents). Also, preserves the authors rights to use the work integral or partially in lectures, books, and courses, as well as make copies for educational purposes. Finally, the author (s) may use freely the tables and figures in its future work, wherever make explicit reference to the previous publication in International Journal of Psychological Research). The assignment of copyright includes both electronic rights and forms of the article to allow publisher to disseminate the work in the manner that it deems pertinent.

International Journal of Psychological Research

In order to comply with the requirements for the publication of articles in the **International Journal of Psychological Research**, it is necessary for the authors to show, preferably in a note of copyright in the manuscript, the activities and relationships that could be interpreted as a conflict of interest, even if it is not believed that is no conflict or bias exists.

Compliance with the APA, the shares in a company through a mutual fund almost never represents a mutual conflict of interests that need to be known, while wages, research scholarships, research grants and personal actions do. They are also seen as potential sources of bias, that the authors are holders of copyright and/or beneficiaries of royalties from a product or service used or dealt with in the study, as well as the relationship of the authors with an entity or person involved in the development of the same.

Read the previous publication policy, select one of the following:

Nor the author (s) of the article presented or his/their closets family (ies) has (have) a financial agreement or important membership with products and services used or dealt within the article or any other possible potential bias against another product or service.

The author (s) of the submitted article (or an immediate member of their (s) family (ies)) have financial participation or important affiliation with products or services used or dealt within the article.

The author (s) of the submitted article (or an immediate member of their (s) family (ies)) have financial participation or important affiliation with products or services used or dealt within the article. In case of choosing the second option, name at the end of this policy the product or service and the nature of relationship with each one of them (e.g., investments in stocks or bonus, scholarships, research, employment, property or society, consultancy fees or other remuneration).

Name of the product: _____

Relation/interest: _____
